User Acceptance Testing Test Cases

1. User should be able to login to their account if using the correct credentials
2. User authentication fails when the user provides invalid credentials
3. Upon login, past posts from a user are retrieved

Acceptance Criteria

1. A user must complete all mandatory fields to log in
 - a. First Name
 - b. Last Name
 - c. Email
 - d. Password

Information from the form is stored in the 'users' table in the database

2. If a user enters an invalid credential, the login should not go through. The system should reset and allow user to re-enter credentials
3. Upon login, the past posts that a user has made should still exist on their account

Songs and posts are selected from the 'post' table
