Muluken Chekilie

User Acceptance Testing Test Cases

1. User should be able to login to their account if using the correct credentials
2. User authentication fails when the user provides invalid credentials
3. Upon login, past posts from a user are retrieved

Acceptance Criteria

1. A user must complete all mandatory fields to log in

- First Name
- Last Name

c. Email

d. Password

Information from the form is stored in the 'users' table in the database

2. If a user enters an invalid credential, the login should not go through. The system should reset and allow user to re-enter credentials
3. Upon login, the past posts that a user has made should still exist on their account Songs and posts are selected from the 'post' table

Individual Contributions:

Lauren: Database updates, logout feature Updated database

Giuliano: Making all HTML files into ejs files Font Changes

Carlos: switch account feature, login feature Add files via upload

Zixuan: creating the settings page Add setPic feature

Muluken: created ejs for login and is completing the incorporation of it to the js file finish set name and reset the homepage
Kate: wrote testing Add files via upload

Project Management Board

Updates and linking

0 days remaining   Complete sprint

To add features to complete the minimum for the project and to get all the pages linked and potentially making ejs files
