Zixuan Ni

Milestone 3

Completed Features:
      As a team we had a statically hosted website for our demo. We had a navigation bar that had our logo and took you to our completed pages. Our completed pages included a home page with a preliminary working visualizer; an account page that you could add facts about yourself and a picture; a login page that included password requirements.

Worked during Demo:
      All of the things above worked in our demo.

Issues that were faced:
      The visualizer did not have a pause/play button. There were some links in the nav bar that did not work. The website was statically hosted and not a database, there were some picture issues with the account page. Overall theme was not continued through all pages.

Suggestions by TA:
      He suggested that we begin to think about getting a database for our group meaning a node.js file. He agreed that some of the easy bugs could be fixed but overall he said it was good.

Individual Contributions:
Lauren Paredes: Hosted website, organized everyone
Carlos Bueno: Home page including the visualizer
Giuliano Costa: Account page
Kate Reynolds: Login page
Muluken Chekilie: Navigation bar
Zixuan Ni: Creating logo and database diagram
